For many people with tailor's bunions, surgery is an appropriate option when conservative treatment methods have failed to provide adequate pain relief. Tailor's bunion surgery—generally referred to as a tailor's bunionectomy—is designed to remove the “bump” of the bone, correct the changes in the bony structure of the foot, and correct soft tissue changes that also have occurred. The goal of tailor's bunion surgery is to reduce pain, improve function and decrease deformity to enable the patient to resume normal activities.

Different types of surgical procedures are available to treat this condition. In selecting the procedure, your surgeon has taken into consideration the extent of your deformity based on x-ray findings, your age, your activity level, and other factors. Two common types of procedures, which may be modified by your surgeon, are described below.

### Exostectomy

After making an incision over the joint of the little toe (fifth metatarsal phalangeal joint) to gain access to the joint, the surgeon:

- Inspects the joint and surrounding soft tissue
- Removes, if present, a painful fluid-filled sac (bursa) that may lie on top of the “bump”
- Removes the bony prominence of the fifth metatarsal
- Closes the incision with stitches and applies a sterile bandage

### Osteotomy

In addition to the procedures described above, it is sometimes necessary for the surgeon to perform an osteotomy. If so, the surgeon then:

- Makes a cut in the bone of the fifth metatarsal and realigns the bone

- Inserts some type of fixation hardware, typically screws or pins, to secure the realigned bone
- Closes the incision with stitches and applies a sterile bandage

## Taylor's Bunion Surgery *continued*

### Recovery

Recovery from these procedures generally take 6-12 weeks.

During a portion of this period, weight bearing on the operative foot may not be permitted. ■

American College of  
Foot and Ankle Surgeons®

This information has been prepared by the Consumer Education Committee of the American College of Foot and Ankle Surgeons, a professional society of over 6,500 foot and ankle surgeons.

Members of the College are Doctors of Podiatric Medicine who have received additional training through surgical residency programs.

The mission of the College is to promote superior care of foot and ankle surgical patients through education, research and the promotion of the highest professional standards.
